

# **Domine RAG ChatBot**

**PHOENIX THOZHA**

SARASWATHY COLLEGE OF ENGINEERING  
AND TECHNOLOGY

OLAKKUR,TINDIVANAM-604305

# WORK FLOW

- Upload Documents – Domain-related PDF, DOCX, or TXT files are uploaded.
- Preprocessing – Documents are split into smaller chunks and cleaned.
- Embeddings – Each chunk is converted into vector embeddings.
- Vector Database – Embeddings are stored in FAISS/ChromaDB.
- User Query – User asks a question.
- Similarity Search – The system finds the most relevant document chunks.
- LLM Generation – The LLM generates an answer using only the retrieved content.
- Final Output – The chatbot returns an accurate answer with document references

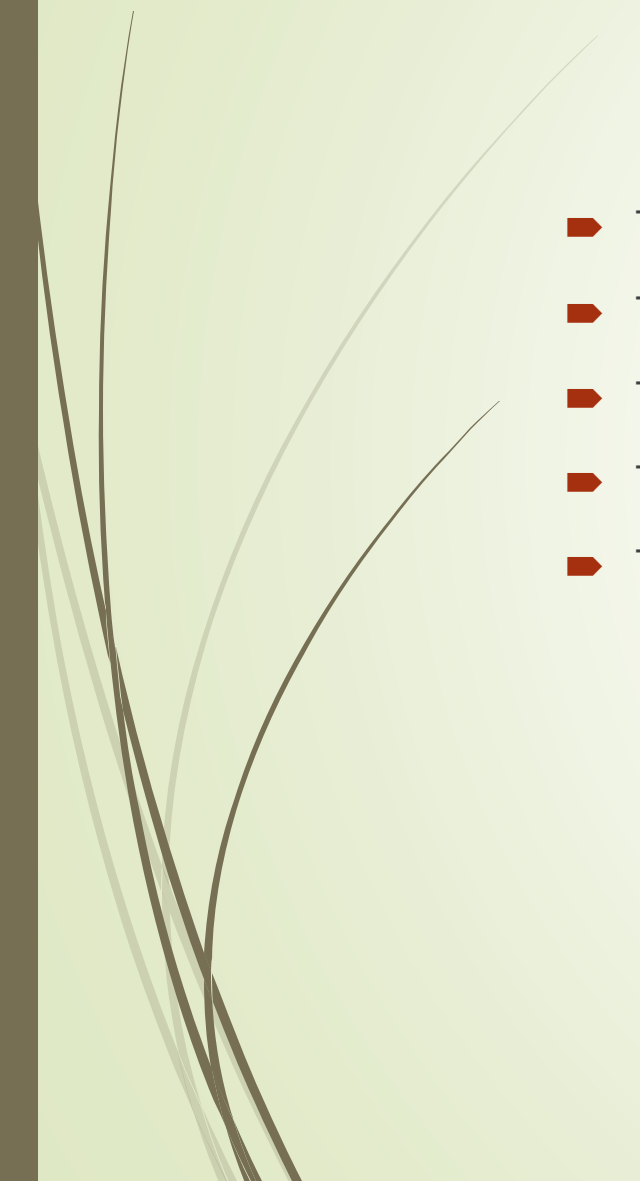

# ABSTRACT

- AI-powered chatbot that answer only from uploaded documents.
- Uses retrieval-augmented generation (RAG) for accurate responses.
- Retrieves relevant information before generating answers
- Reduce AI hallucinations and improves reliability
- Suitable for education, healthcare, legal and enterprise knowledge bases

# purpose

- To provide accurate answers using uploaded documents.
- To reduce AI hallucinations and misinformation.
- To improve information retrieval with RAG technology.
- To deliver fast and reliable responses.
- To support domain-specific knowledge for users.

**THANK YOU**
